

Tradesync Pro (v1.0.0)

[USER MANUAL]

Introduction:

- A professional trade copying software with some unique features
- Beneficial for traders in many ways for trading Forex, CFDs, Crypto, Commodities
- Supports only MT4/MT5 client accounts with any Forex Broker

System Requirements:

- OS(Windows 10/11)
- .NET Framework version 10.0
- Stable internet connection
- MT4/MT5 installed

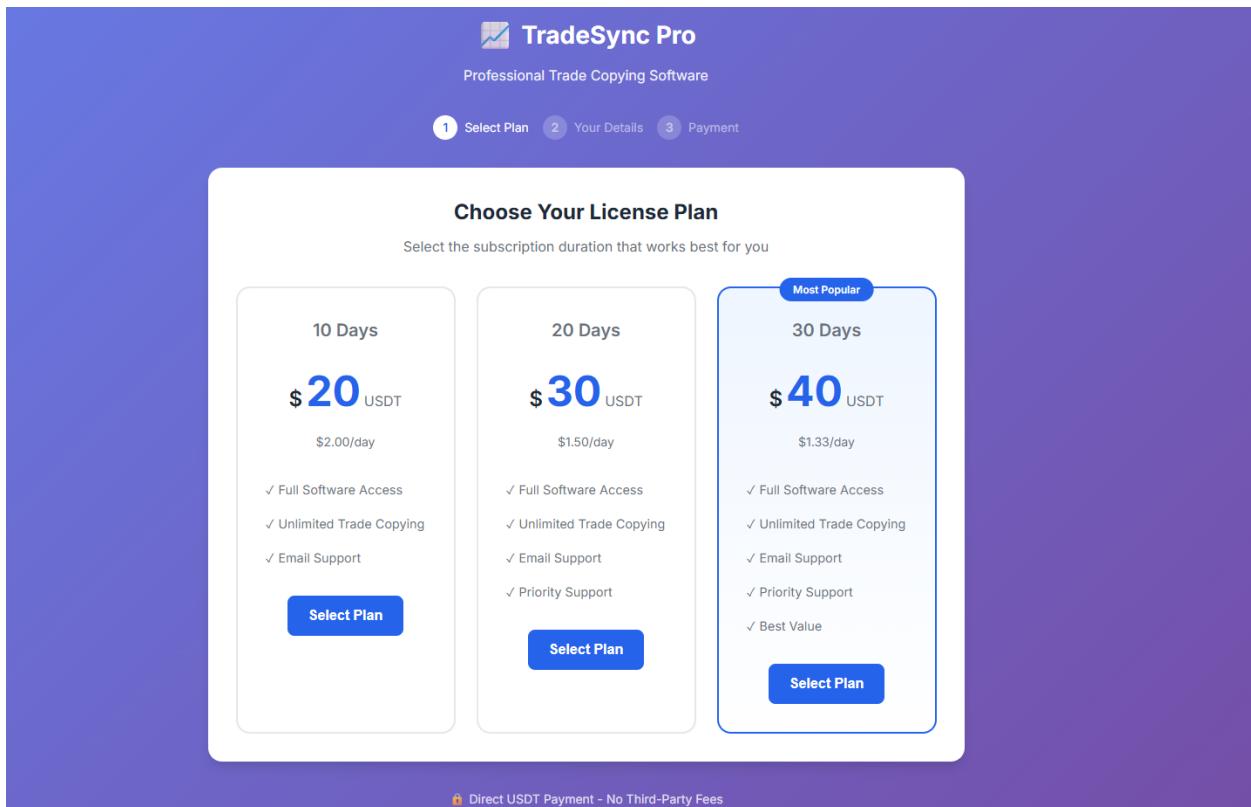

Step-by-step Instructions

Authentication:

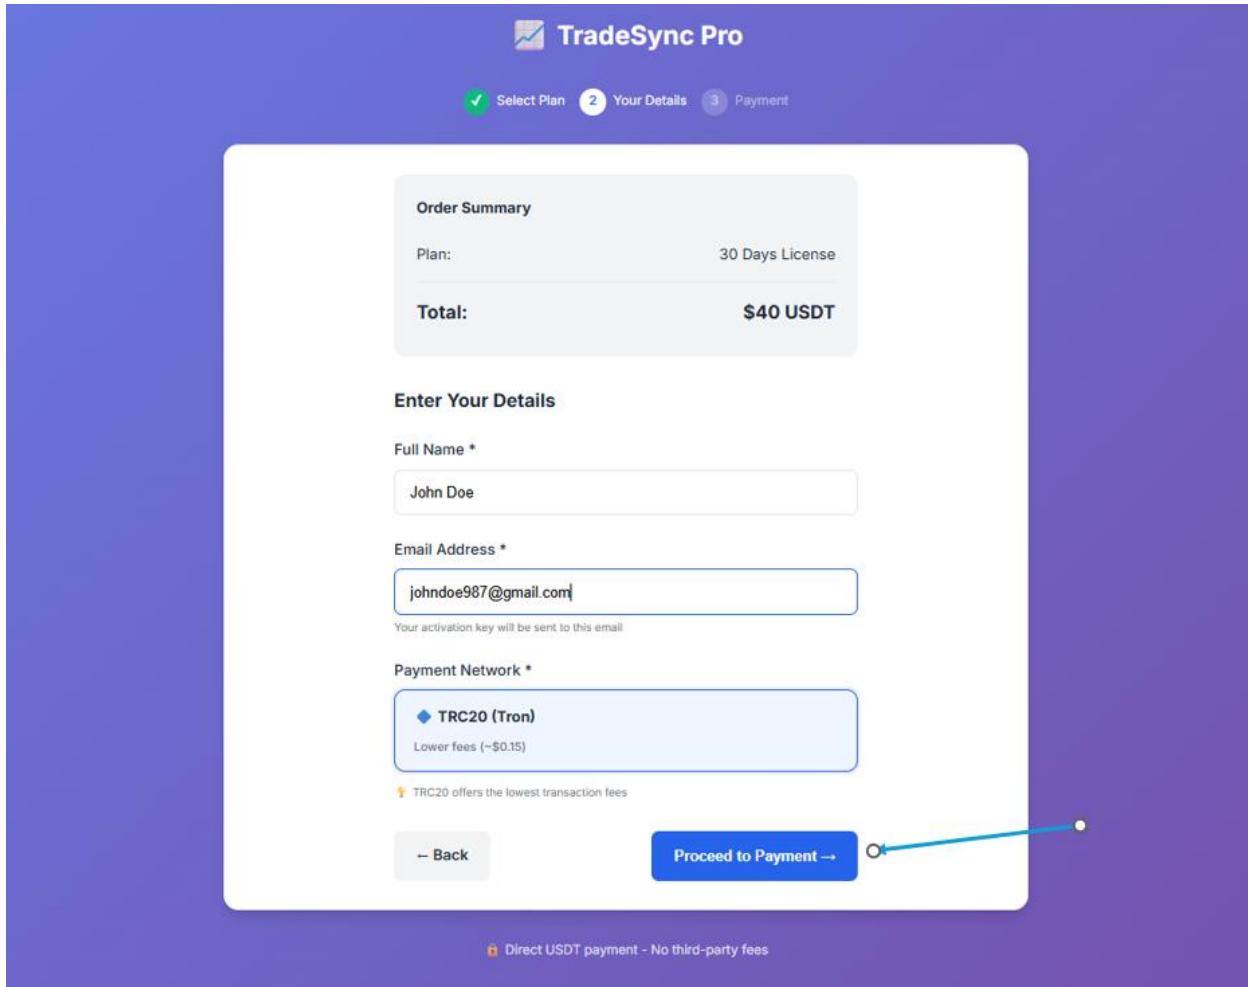

- Download, install and run the application and the first thing we see is an Authentication window as shown below:

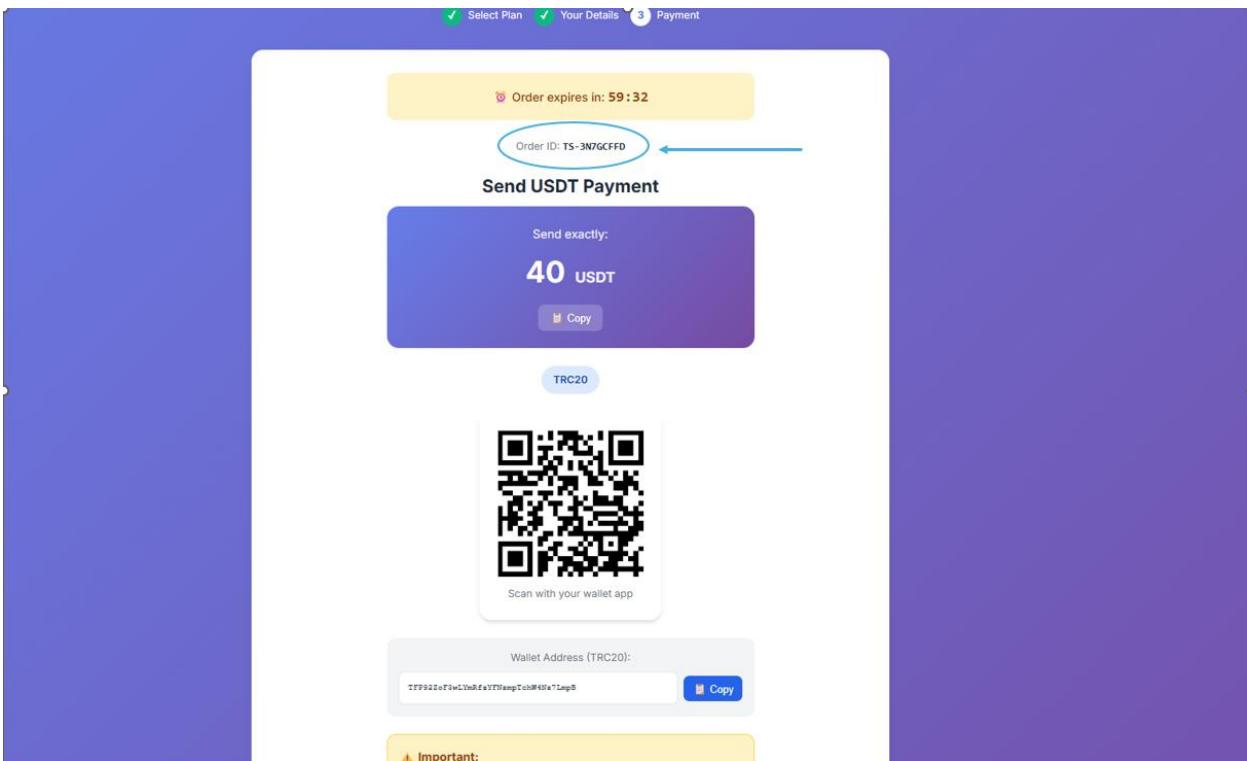

- We must have a valid license key to use this application so click on “[Request Activation Key](#)” and it will take us to a web page where we can purchase a subscription based license key.

- Here we can purchase a license key based on our desired plan. Assume we select 30 days subscription for a license key. On next page we must enter a User Name and a valid Email Address

- On this page, Enter → User Name → Email Address and click Proceed to Payment
- When we click proceed to payment → it takes us to payment page where we have to pay the exact amount with crypto USDT-TRC20. See Below:

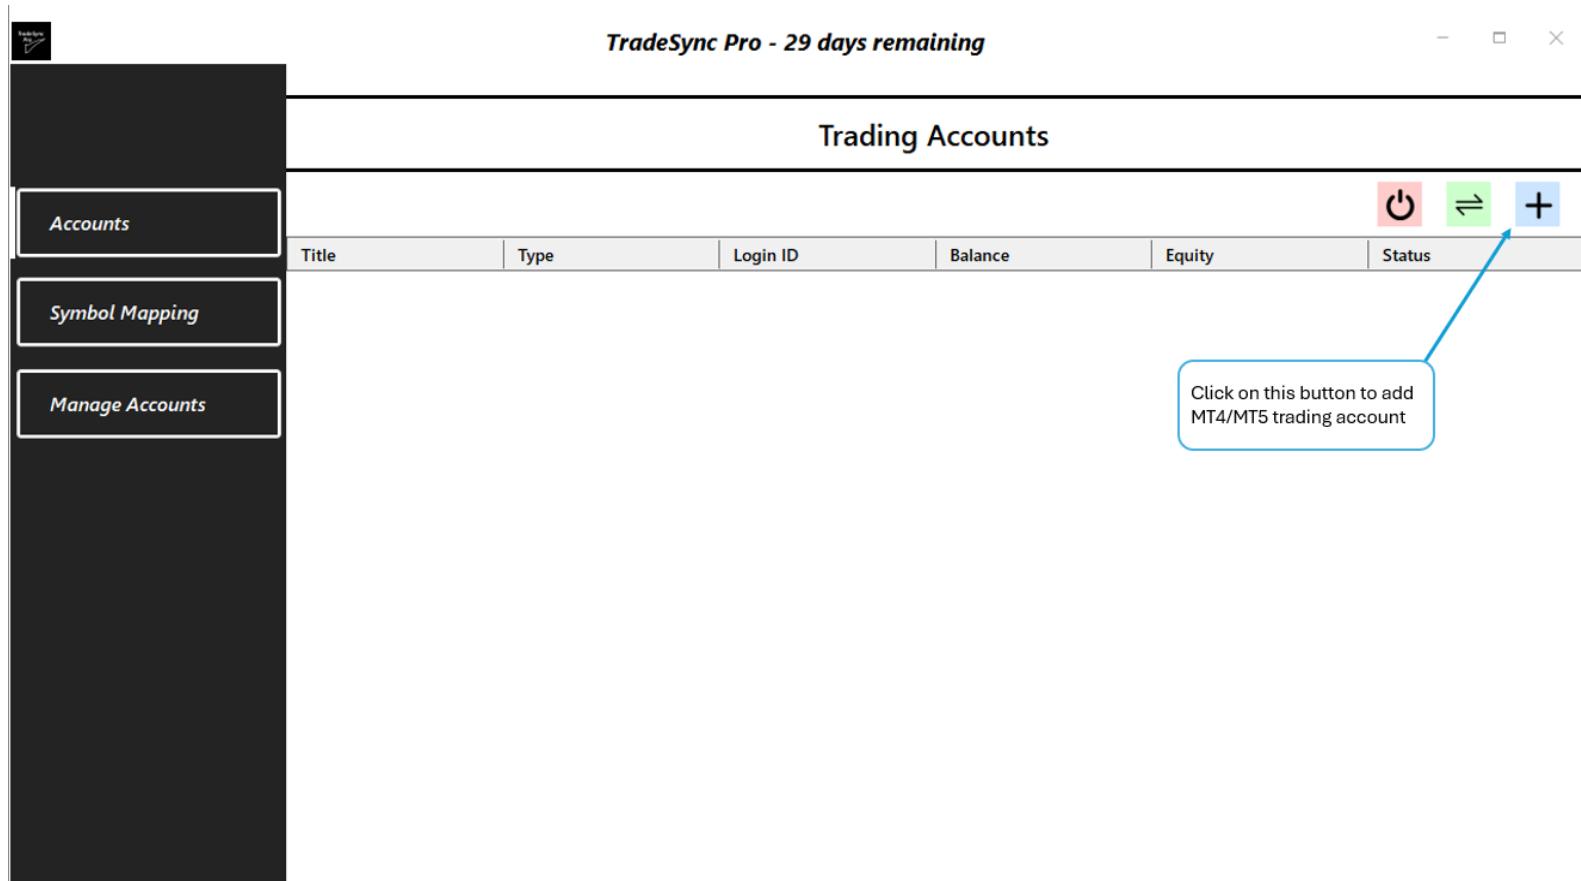

- On this page, carefully read the instructions and pay the exact amount with USDT -TRC20 based on subscription plan and after payment confirmation we will receive an email containing a valid license key.
- **IMPORTANT INSTRUCTIONS:**
 1. Note your Order ID as shown in image above and write it down somewhere for any support related queries or if you face any issues with your order.
 2. Must pay the exact amount, if you pay the wrong amount you will not receive the license key through email.
 3. Don't share your license key with anyone

- After we receive a license key, we have to enter the license key in Authentication window and click Activate button as shown below:

- After successful authentication we will be able to use our application.

Add Trading Accounts:

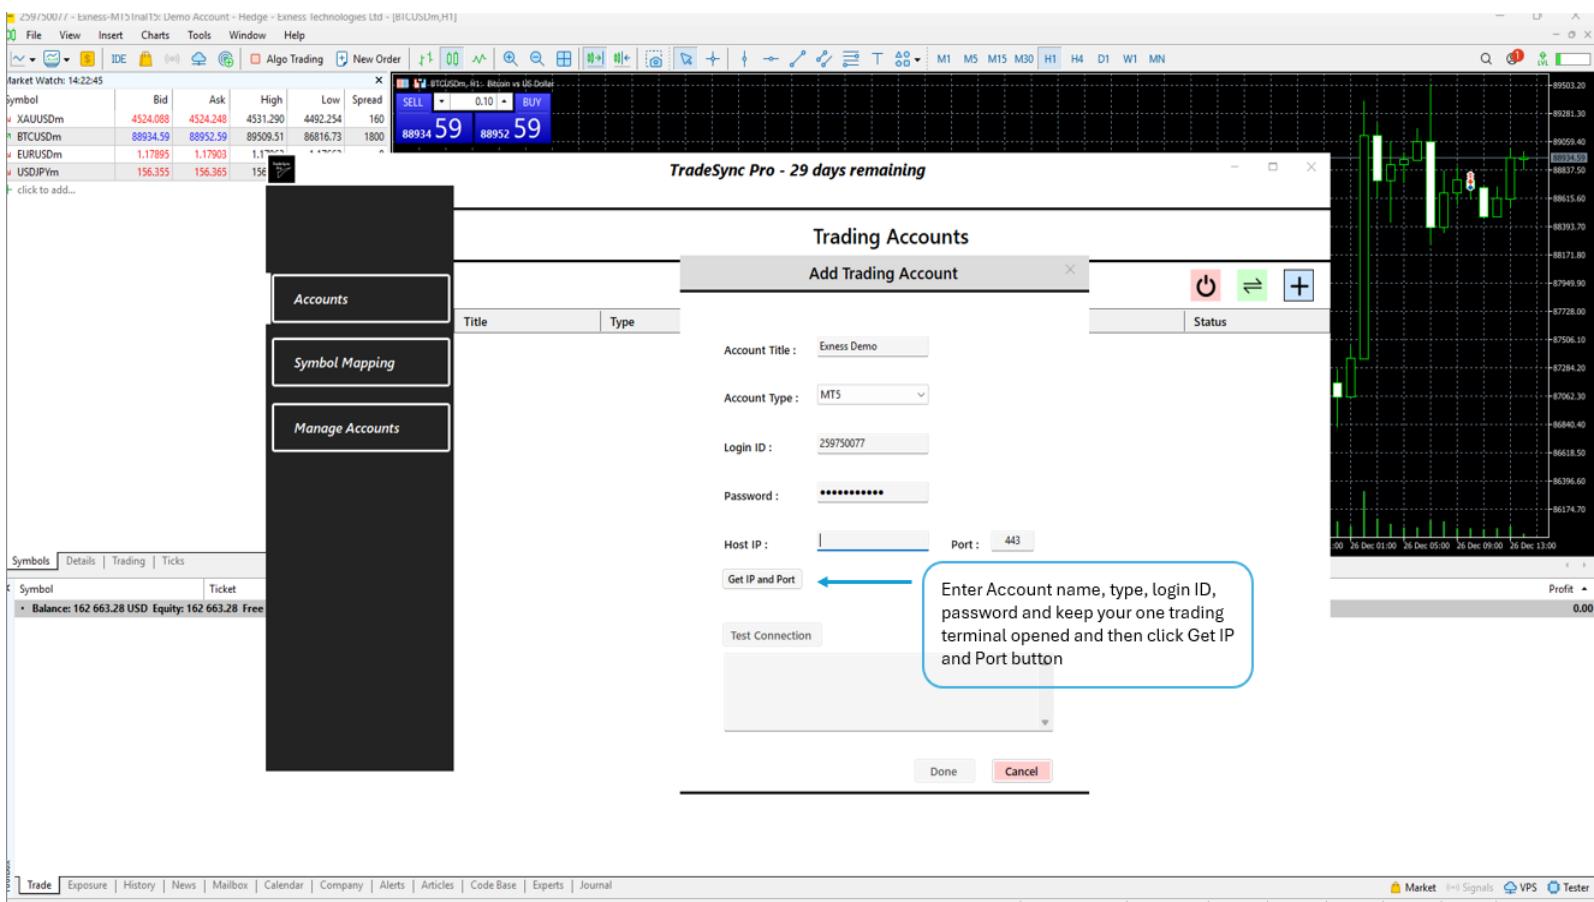

- **IMPORTANT INSTRUCTION FOR ADDING ACCOUNTS:**

1. You must have opened only one MT4/MT5 trading terminal while adding a trading account to avoid Host IP conflicts from different brokers. Follow instructions ahead and you will get it.

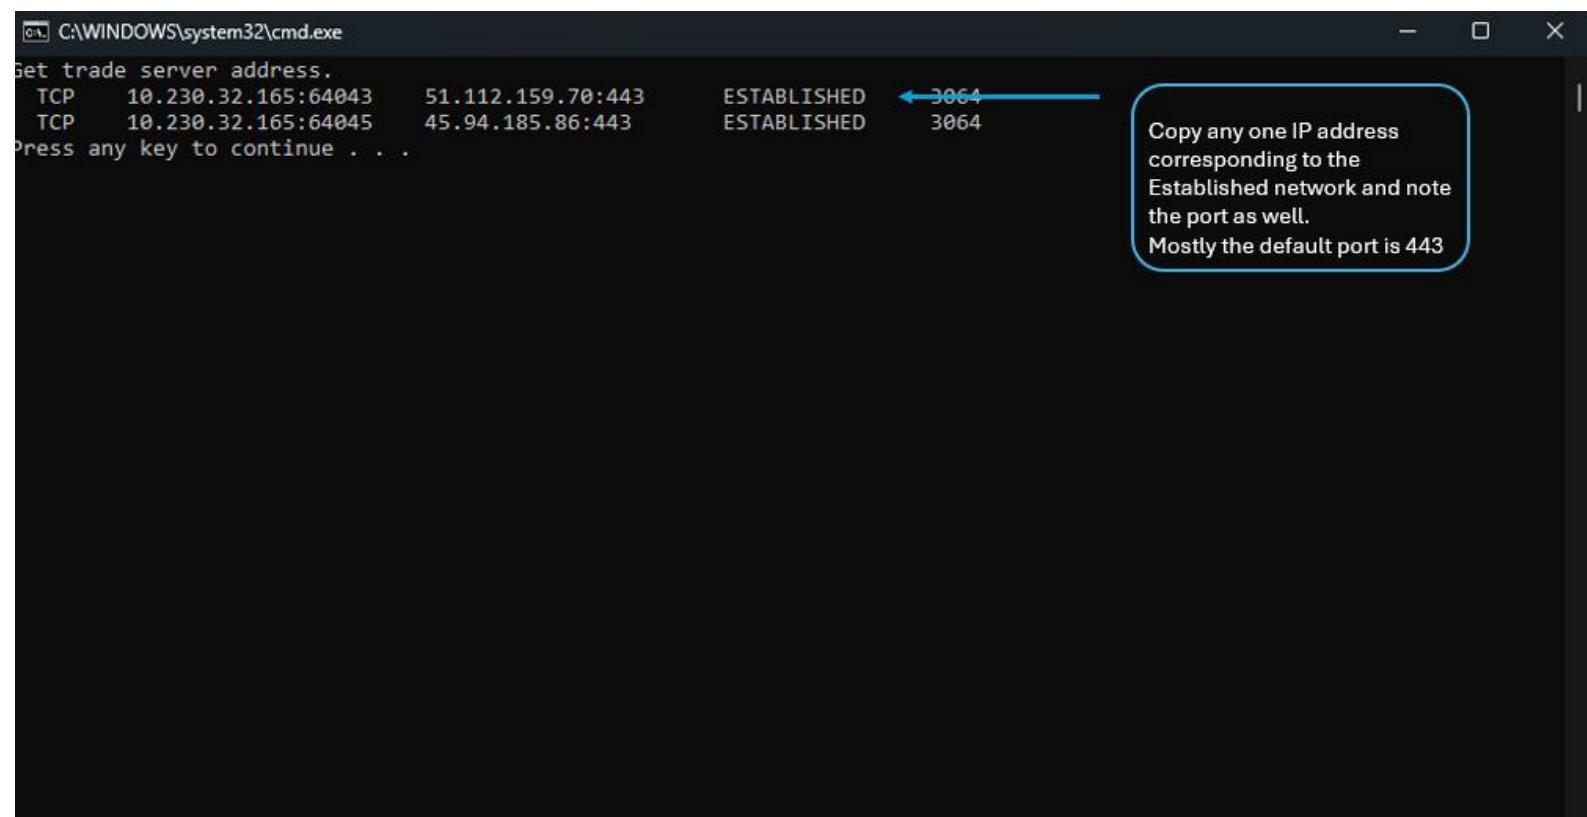

- When we click Add Account button a window appears that allows us to add an account.

See below:

- On this Add Account Window → Enter Account Title, Account Type (MT4/MT5), Login ID, Password and then click “Get IP and Port” button.
- Keep your specific Meta Terminal/Tracker opened (the one specific account’s Terminal that you are adding in this software) while adding account to fetch Host IP address and port.

- On clicking “Get IP and Port” button a window appears that shows Host IP address and Port as shown below:

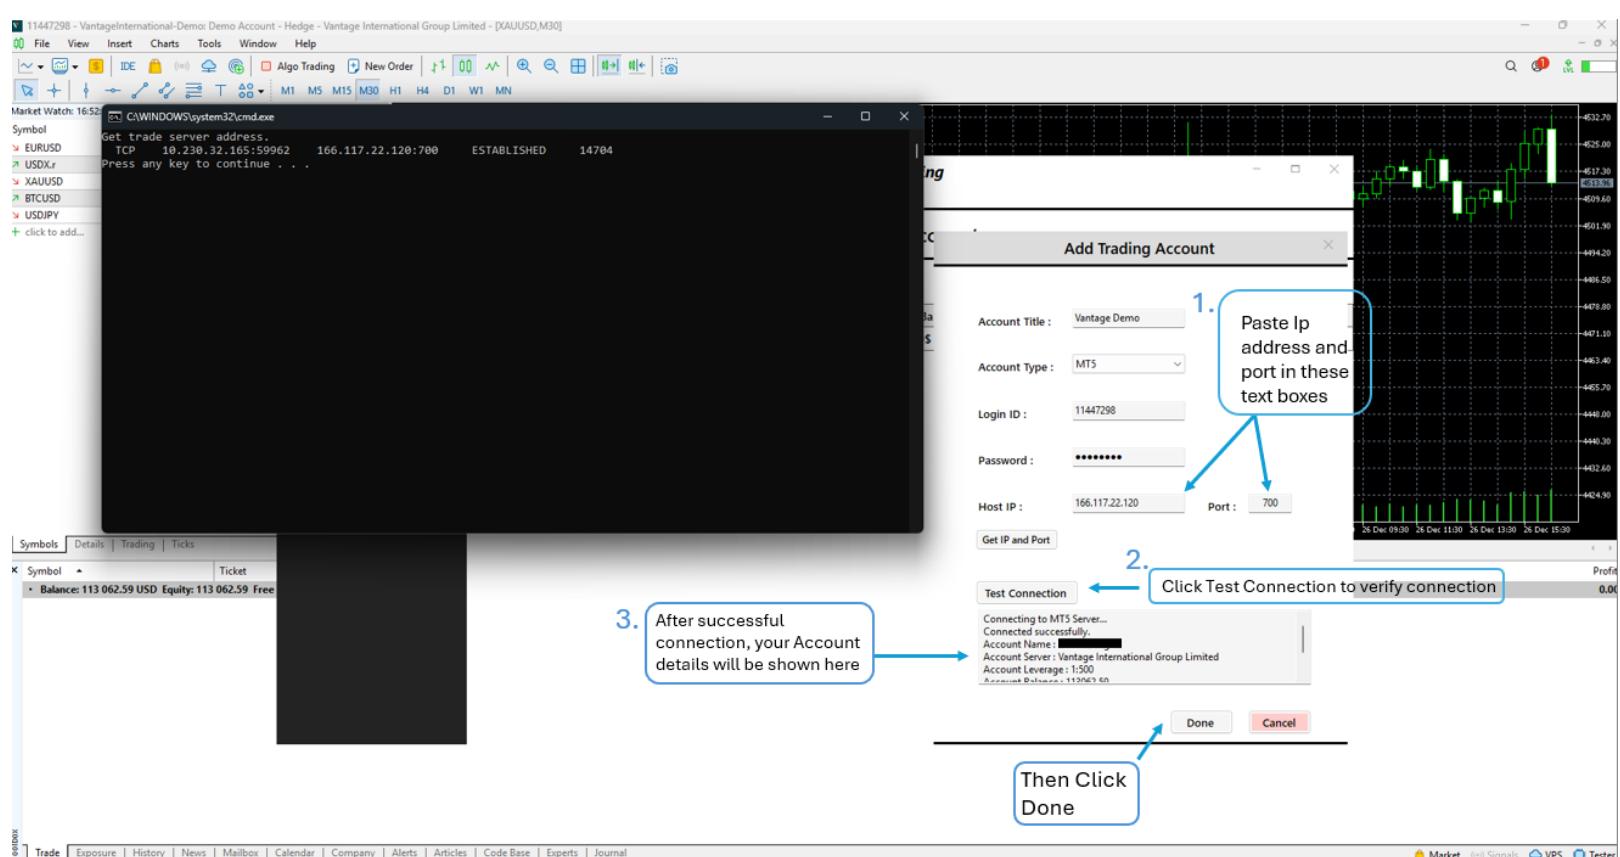

```
C:\WINDOWS\system32\cmd.exe
Get trade server address.
TCP    10.230.32.165:64043      51.112.159.70:443      ESTABLISHED      ← 3064
TCP    10.230.32.165:64045      45.94.185.86:443      ESTABLISHED      3064
Press any key to continue . . .
```

Copy any one IP address corresponding to the Established network and note the port as well.
Mostly the default port is 443

- IMPORTANT: If we have multiple Meta terminals opened while adding account then on clicking “Get IP and Port” button shows us multiple IP addresses and we will get confused which IP address is from which broker.

- Copy the IP address and paste it in Add Account window next to the Host IP field and click Test Connection button to verify connection and click Done.
- Let's just add one more account and everything is shown in one image below:

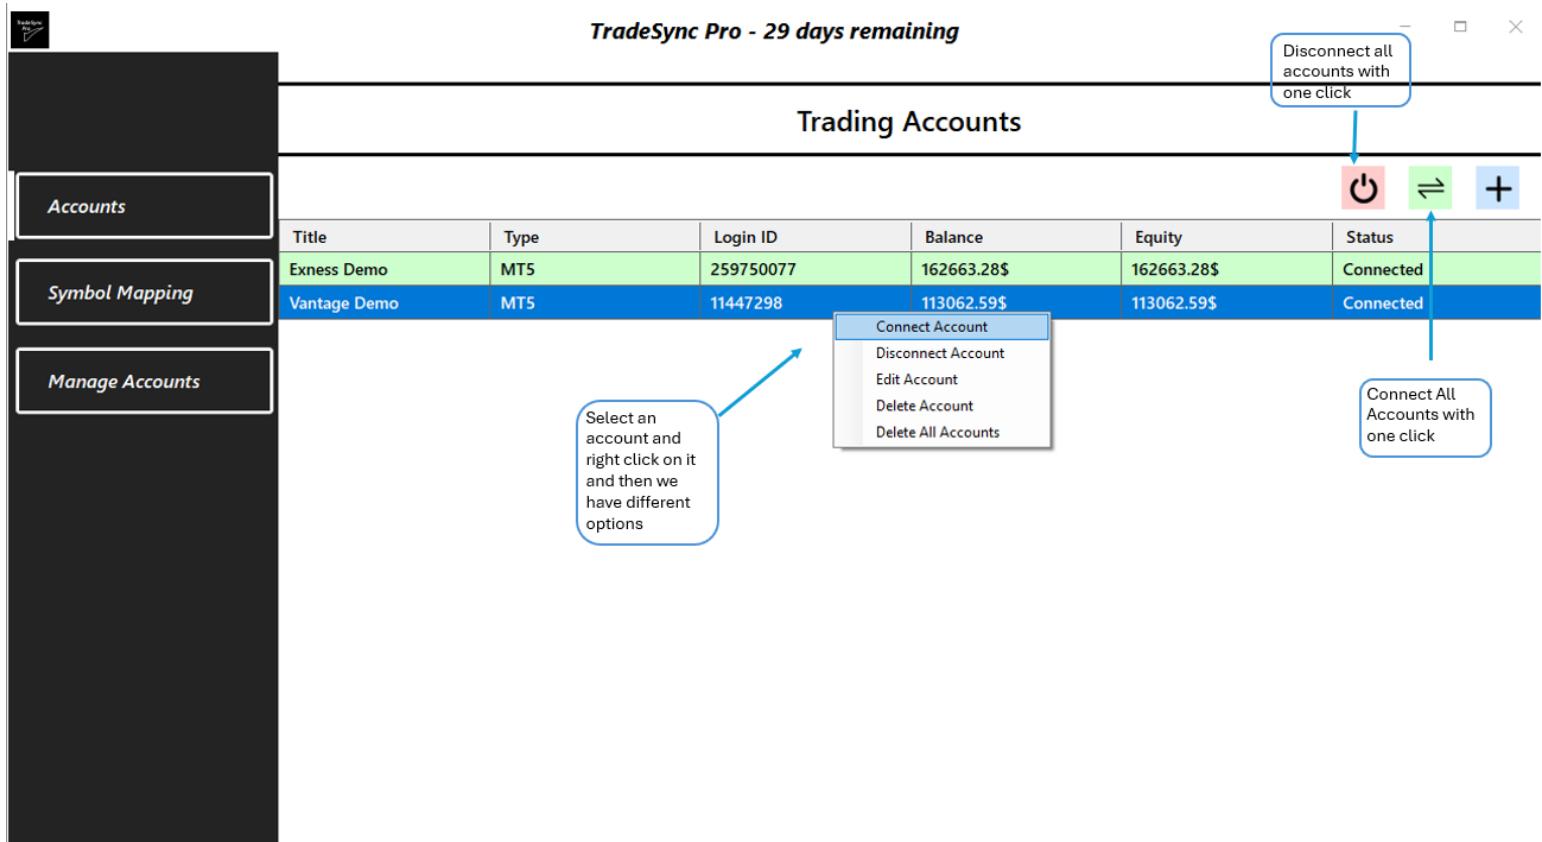

- We can see in the image below that we have added two different trading accounts.

The screenshot shows the TradeSync Pro application window. At the top, it displays "TradeSync Pro - 29 days remaining". Below this is a title bar with the text "Trading Accounts". On the left side, there is a sidebar with three buttons: "Accounts" (selected), "Symbol Mapping", and "Manage Accounts". The main content area contains a table titled "Trading Accounts" with the following data:

Title	Type	Login ID	Balance	Equity	Status
Exness Demo	MT5	259750077	0\$	0\$	Disconnected
Vantage Demo	MT5	11447298	0\$	0\$	Disconnected

On the right side of the main window, there are three icons: a red power button, a green double arrow button, and a blue plus sign button.

- Now we must connect these accounts to their respective host servers for trade copying operations.
- We can connect accounts one by one (Right click → connect account) or we can use the light green button in the top right corner to connect all added accounts.
- See the image below for clear instructions:

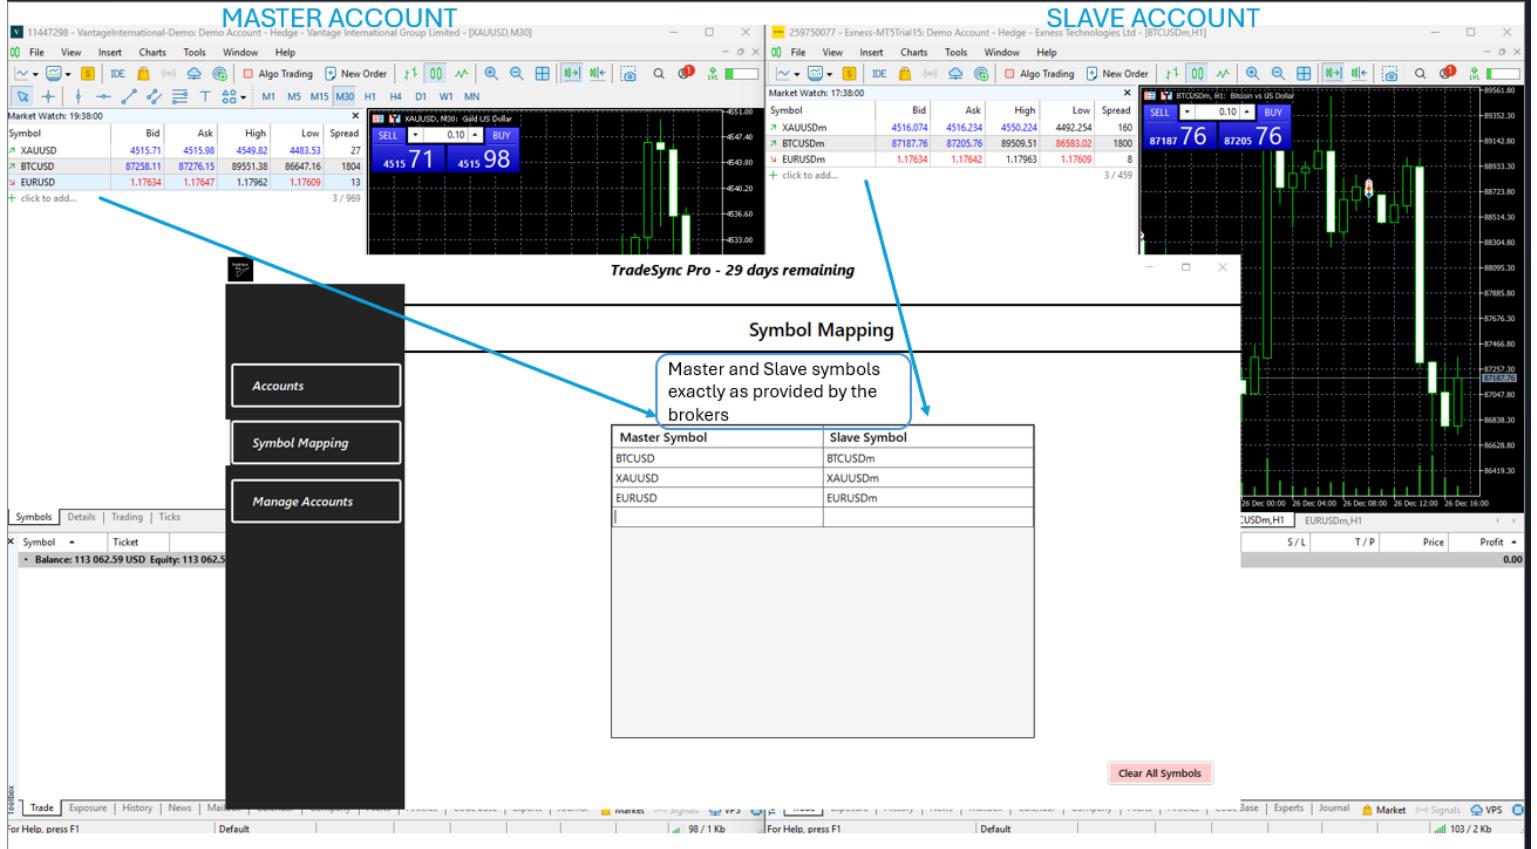

- As now we have added two different MT5 accounts and we can add as much accounts as we want. The next steps are:
 1. Decide your Master and Slave account.
 2. Define correct Symbols for Master and Slave accounts.
 3. Proceed to Manage Accounts and set Master and Slave accounts and select trade parameters according to your choice.

Symbol Mapping:

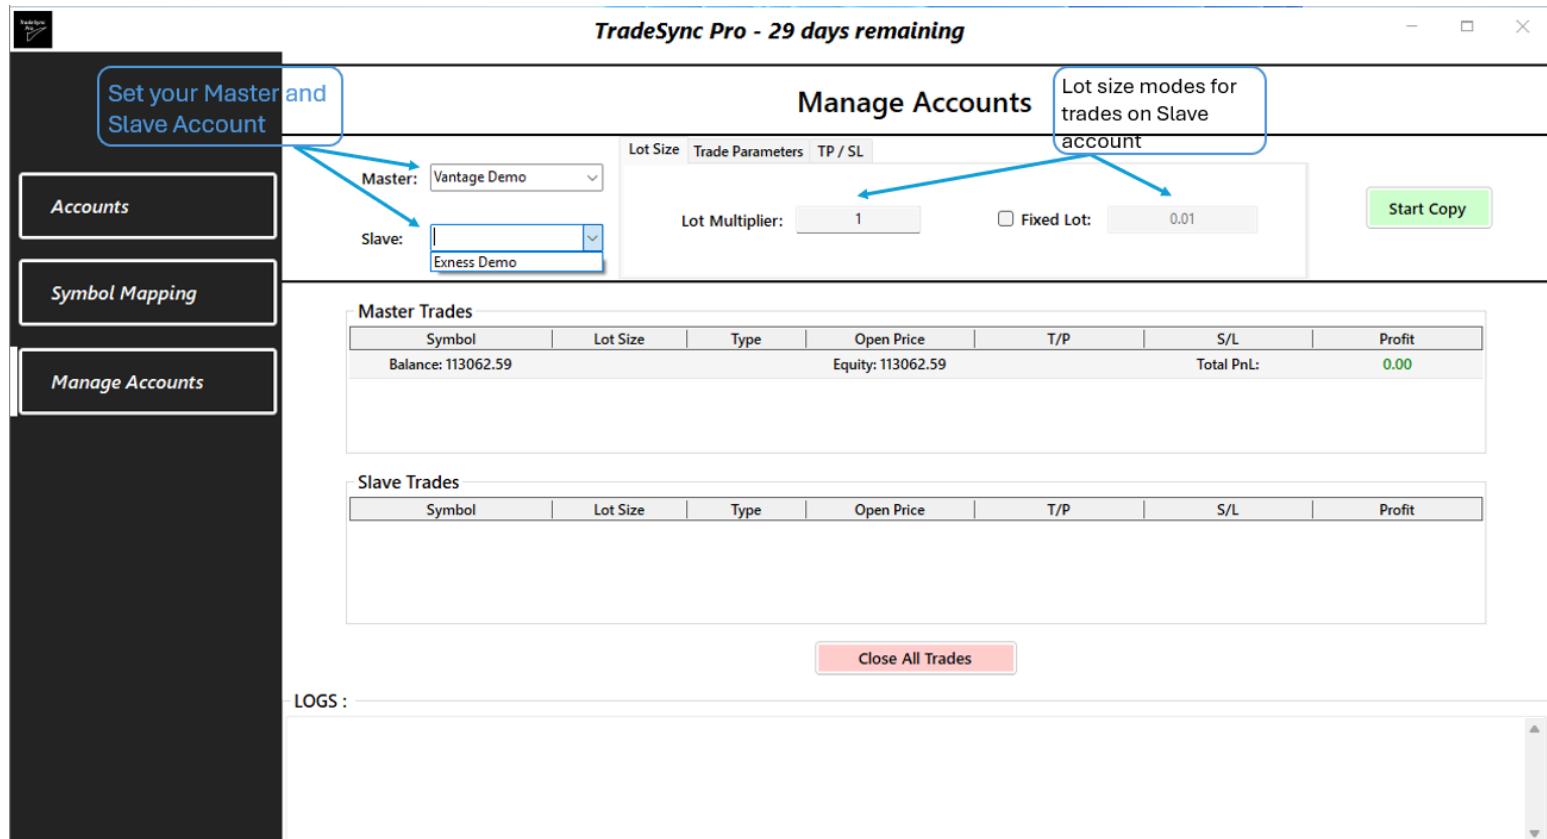

- Decide your Master and a Slave account and proceed to symbol mapping and we have to be careful when defining Master and Slave symbols.
 - Write your Master and Slave symbols exactly as provided by the broker.
 - Double check for Master and Slave symbol's spellings and letters as trading symbols are case sensitive.
 - If we make any mistake in symbol mapping, our application won't be able to copy trades

- See image below for clear instructions:

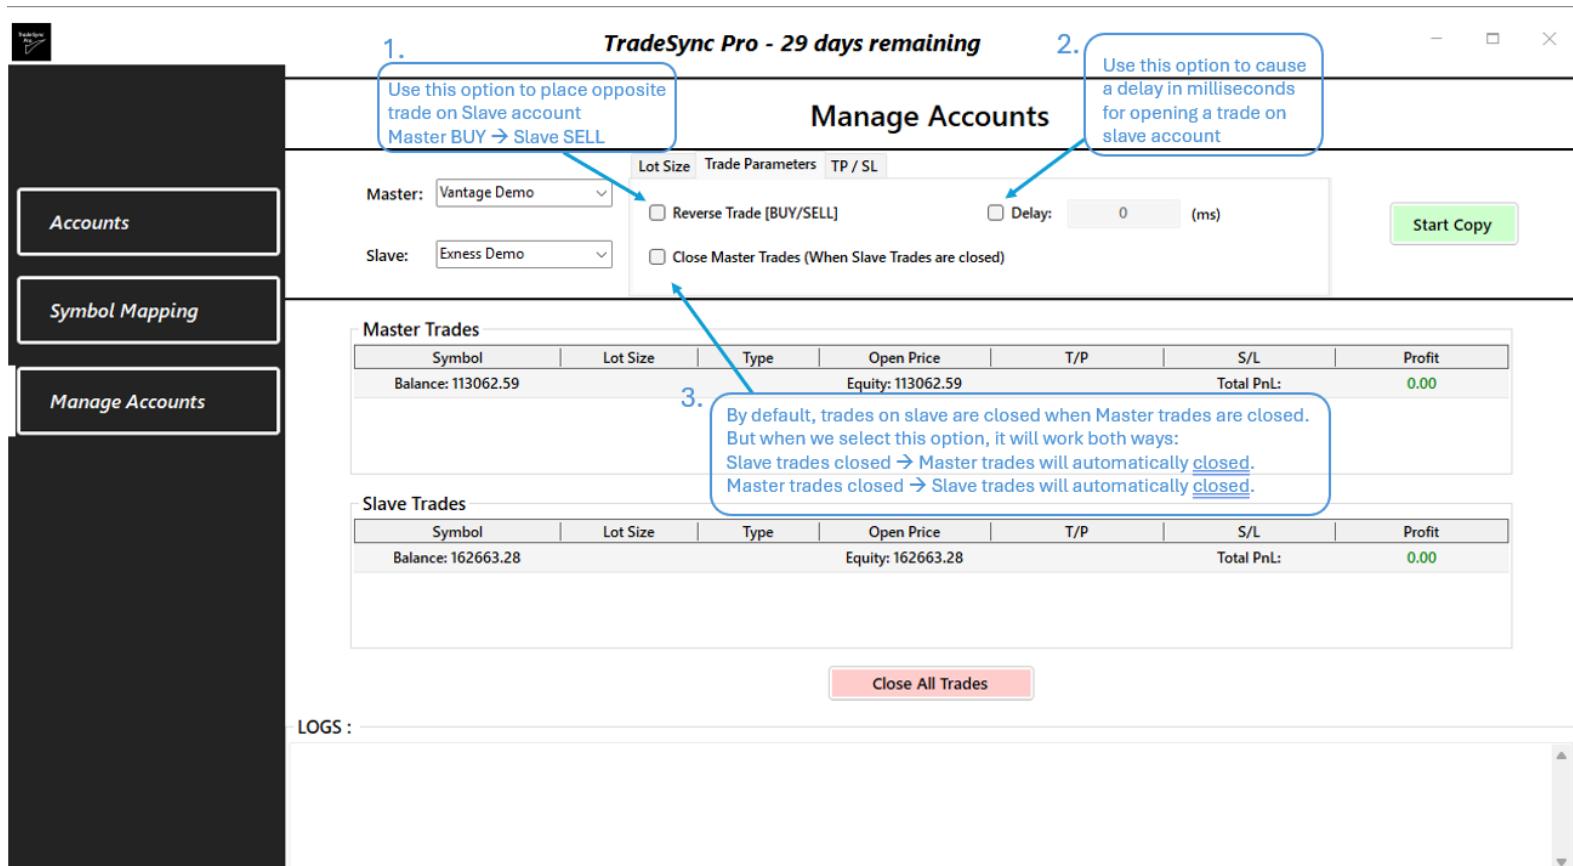

Manage Accounts:

- In Manage Accounts View we can:
 1. Set Master and Slave Account
 2. Select Lot mode
 - i. Multiplier Lot mode → Opens trade on slave by multiplying the lot size of master trade.
 - ii. Fixed Lot mode → Opens trade on slave with fixed value written in text box next to Fixed Lot.

3. In Trade Parameters we have three options:

- i. Reverse Trade → Opens opposite trade on Slave account [BUY / SELL]
- ii. Delay → causes a delay in milliseconds for opening a trade on slave account.
- iii. Close Master Trades → Use this option when you want your master trades should automatically be closed when Slave trades are closed.

TradeSync Pro - 29 days remaining

Manage Accounts

Master: Vantage Demo

Lot Size Trade Parameters TP / SL

Reverse Trade [BUY/SELL]

Delay:

0 (ms)

Stop Copying

Slave: Exness Demo

Close Master Trades (When Slave Trades are closed)

Master Trades

Symbol	Lot Size	Type	Open Price	T/P	S/L	Profit
Balance: 113062.59			Equity: 113062.59		Total PnL: 0.00	

Slave Trades

Symbol	Lot Size	Type	Open Price	T/P	S/L	Profit
Balance: 162663.28			Equity: 162663.28		Total PnL: 0.00	

LOGS :

[23:25:59] Copy trading started:
[23:25:59] Master: Vantage Demo
[23:25:59] Slave: Exness Demo
[23:25:59] Lot: Fixed (0.01)
